### PROFIGOLD PROFESSIONAL CUSTOM INSTALLATION INTERCONNECTS

**Paris, XX November, 2008** - Bandridge, the European connectivity specialist, is pleased to announce the launch of its new line of high quality Professional Custom Installation interconnects, which adds to its existing award-winning retail product lines. These new longer length audio, video, antenna and multimedia cables have been designed to fulfil the specific requirements of demanding professionals involved in complete home cinema and corporate installation projects.

### THE TRUE CHOICE FOR VISIBLE QUALITY

The new Profigold line offers an optimal installation experience and guarantees the best quality / price ratio. The resealable, transparent heavy duty poly bag packaging not only ensures easy recognition of connector types, but also reduces unpacking time and waste and is therefore more environmentally friendly. What's more, the product is ideal for logistic departments: handling is easier and space efficient.

### CABLE SPECIFICATIONS

Only the best possible components and manufacturing methods are used to offer customers leading features such as cellular PE insulation for the lowest possible signal attenuation, which results in crystal clear high frequencies for both audio and digital signals. The extra thickness of the conductors, as well as the Double Braided Spiral and additional foil screening, also safeguard against signal loss even at lengths of up to 20 metres. Profigold comes equipped with highly **effective IAT** filters (Interference Absorption Technique) placed on all analogue video and most audio interconnects, which minimise the effect of Radio Frequency Interference. Furthermore, all Profigold Professional Conductors use High Grade 99,996% Oxygen Free Copper and 24k hard gold plated plugs to prevent corrosion, guaranteeing long lasting installation.

# PRESS RELEASE

The logo for Profigold, featuring the word "PROFIGOLD" in a bold, sans-serif font inside a dark, rounded rectangular shape with a metallic, 3D effect. The logo is set against a yellow background that has a subtle, wavy pattern.

### UNIQUE PLUG DESIGN

Profigold Professional plugs are colour coded for easy installation and their Flexible Strain Relief design guarantees maximum flexibility without damaging the interconnect. The addition of internal silver soldering minimises transition resistance.

### HDMI 1.3b CAT 2 CERTIFIED

All Profigold Professional HDMI interconnects are HDMI 1.3b cat 2 certified - they support up to 1440p picture resolutions, thereby making them effectively "Future Proof", handling data speeds of 10.2 Gbps and up to 48Bit colour for ultimate resolution and frame rates. They also support Dolby® TruHD and DTS-HD Master Audio™ multi channel audio, and are compatible with Blu-Ray, PS3® and Xbox® for true life gaming, delivering the ultimate sound and vision experience even with longer length cables of up to 20 metres.

"The next step in our global expansion, Profigold Professional is our complete new solution for the custom installation market," stated Marco Pastoor, Marketing Manager at Bandridge. "Profigold Professional is not just another product line, but is specially geared towards the demanding professional installer who insists on award-winning quality and reliability, combined with installation friendly packaging," he added.

### AVAILABILITY

The Profigold Professional range will be available from dedicated installation partners and CEDIA Professionals at the end of November 2008. Further information can be found on [www.profigoldprofessional.com](http://www.profigoldprofessional.com)

### ABOUT BANDRIDGE
